"Fresh from the Gardens"

The Western Economic Outlook

Writing in "Agricultural and Industrial Progress in Canada," Mr. John P. Bennett, Industrial Commissioner, Western Union, Canadian Pacific Railway, declares that confidence in the outlook for 1934 business in the dominant features of the Western situation. Signs are not lacking in many parts of Canada that we are slowly emerging from the depression of the past two years. Improved prospects are more noticeable in the Western parts of Canada, where some acceleration is apparent in the manufacturing industries. In the West where we depend almost entirely on agriculture, recovery will necessarily be more slow in coming. As a matter of fact we cannot hope for any great degree of prosperity while agriculture languishes. A good crop, fair prices for our wheat, and a market for our products are the most vital factors. By showing signs that improvement is taking place, together with the realization that an upturn is now probable, has brought us the needed confidence. It is being felt that the recovery is taking place at a period of trade and industrial expansion, to a moderate degree, possible. Anticipated during the last few months, it is not difficult to foresee the demand that every effort is being put forth to increase the volume of business throughout the West by methods that are most likely to succeed favorably.

It is, of course, too early to state what programme of new development is likely to be undertaken towards the end of last year appeared to indicate that some industrial expansion of new might take place during the present year, and that there may be more money available for building operations of all kinds. In this respect, there should certainly be a distinct improvement over 1933 in monetary requirements are to be met in the erection of houses and commercial buildings, quite apart from any factory expansion. Any programme of new building will improve the home builder market, which has been nearly at a standstill for some time, though the expert builders have been showing important increases.

The mining industry is looking for a steady improvement, and activities in relation to development show a confident outlook in the report. In British Columbia, the mining industry is showing a steady improvement, increasingly larger scale, which will bring some important projects into operation during the next few months.

The Western agricultural situation is a matter of constant study of crops and means to bring it to a more stabilized level, but, in the meantime, the Western agricultural situation is being improved by the methods in the production of grain and livestock, having in view that utilization of the resources with a view to increasing the production of food. This is considered to be a reasonable attitude that will eventually result in greater yields for farm products, more especially as the major effort is directed towards a higher standard of living for the people of the West. This work is already showing results that further the belief that the country is being brought back to a normal level.

In Alberta and to some extent in Saskatchewan and Manitoba, drilling for oil and gas is to be continued. The Alberta programme is to be continued, and, according to present indications, the more extensive drilling is being largely investigated in order that the marketing of the products of the oil fields may possibly be put on a better footing, and efforts are being made to expand the marketing area for the products of the oil fields.

It is also being noted that the classes of fish that are available in large quantities from the fresh water lakes in the West.

Device Break Step-Watch

Chained To Check Abolition

Handful Of Food

A device whereby it is claimed it will be possible to eliminate almost the whole of the world's population, as suggested by Dr. E. L. Harting, town, head of the Department of Health, University of Saskatchewan. It applies the principle of the electric chair.

The use of the chair is said to be 20 times more accurate than a stop-watch. It calls for a small amount of wheat, placed between magnets attached to the electrodes of the chair.

The alternating current of the system provides 100 impulses per second and the wheat would remain in the chair for 10 to 15 seconds. Each impulse produces a small amount of heat, which is said to be 20 times more accurate than a stop-watch.

It is also being noted that the classes of fish that are available in large quantities from the fresh water lakes in the West.

H.B. Route Insurance Rates

Licensing or Rates On Shipments

Hubson Bay Is Predicted

Announcement through the high

commissioner's office at London of a

reduction in the marine insurance

rates in the Atlantic Ocean. The rate

in the 1934 season was predicted at

0.15 per cent.

It is reported that negotiations between

representatives of the British

marine insurance companies and the

British government have been in

progress for some time and that the

reduction in the rate will be in the

range of 10 to 15 per cent.

The proposed method, it is said, is

to calculate the rate on the tonnage

of the ship. It is declared that the

cost per ton will be with the rate of

10 to 15 per cent. The rate will be

the same for all ships. The rate will

be the same for all ships. The rate

will be the same for all ships. The

rate will be the same for all ships.

The rate will be the same for all

ships. The rate will be the same

Gardening

For Variety Add Two or Three Flowers

To Your Garden This Year

It is a splendid idea to add a few

flowers to the garden this year.

Without this little departure

from the straight road, a garden

will soon become lifeless. Then, too,

the season may not suit some old

flowers that may require

fresh ground in which to plant the

annuals. It is a mistake to have
